WANT TO SPRAY KLOSS KOTE – BUT NO SPRAY EQUIPMENT?

Klass Kote coatings can be spray-applied using the very inexpensive, disposal PREVAL Spray System, which allows you to achieve a smooth, consistent, professional-looking dried-film coating - all at a very economical price.

The PREVAL Spray System is a professional grade spray system that is good for countless applications. It's disposable, recyclable, easy to clean, and, best of all, no compressor is needed.

The Preval Sprayer's patented venturri vacuum process pulls liquid from any compatible, removable, and refillable container and delivers a professional-grade spray stream to virtually any surface. It's amazing.

- Easy replacement and cleanup with interchangeable and disposable parts
- Great for DIY projects
- Professional- grade finish

The PREVAL Spray System contains an aerosol/vacuum, "Power Unit", a "Product Container", and a "Dip Tube" that sucks the liquid to be sprayed up from the product container and sprays out through the tip of the power unit.

The whole system is easy to use, the containers are easy to clean & reusable and the power units are disposable. There is also an optional "vGrip Universal Handle" that provides more precise control when using the system. There is no need to purchase expensive air compressors, or high-end paint spray guns to achieve the consistent, smooth finish that spray-applying paint provides vs. what brush or roll-applying does.

Also be sure to have some paint filters, and reducer, as spray-applying paint requires pouring the "thinned" paint mixture to be sprayed through a filter into the container.

Any questions, please feel free to contact us directly to discuss the process. [Click here for our links to purchase the Preval system and also other accessories you may need to complete your project.](#)
